

PROJECT DESIGN PHASE-II

Data Flow Diagram Canvas

Project Name: Streamlining IT Procurement: Automating Standard Laptop Orders

Purpose: This DFD represents how a standard laptop request moves from the requester through the procurement workflow and how configuration tasks are automatically generated and assigned to the Hardware Team.

DFD Level 0 – Context Diagram

Requester / Employee Submits standard laptop request	IT Procurement Automation System Validates request → creates procurement task → routes task to Hardware Team → updates request status	Hardware Team Receives configuration task and updates task status
Input: Laptop request details Employee information Required specifications	Data Store: ServiceNow request / task records	Output: Configuration task Status / completion update

Main Data Flows

No.	From	Data Flow	To
1	Requester / Employee	Standard laptop request + employee details	IT Procurement Automation System
2	Automation System	Validated request information	Request / Task Records
3	Automation System	Hardware configuration task	Hardware Team
4	Hardware Team	Task completion / configuration status	Request / Task Records
5	Automation System	Updated request status	Requester / IT Procurement Team

DFD Level 1 – Standard Laptop Procurement Workflow

Step	Process	Input	Output / Data Store
1	Submit Standard Laptop Request	Employee/requester details; laptop requirement	New request record
2	Validate Request	Request record	Validated request
3	Create Procurement Task	Validated standard laptop request	Procurement/configuration task
4	Assign to Hardware Team	Generated task	Assigned hardware task
5	Configure Standard Laptop	Task + laptop configuration details	Configuration completed
6	Update Request Status	Task completion status	Updated request/task record
7	Notify / Close	Updated status	Completion information to requester / procurement

Entities and Data Stores

Element	Description
Requester / Employee	Person who submits the standard laptop request.
IT Procurement Team	Monitors procurement requests and workflow progress.
Hardware Team	Receives and completes the automatically generated configuration task.
ServiceNow Request / Task Records	Stores request, task, assignment and status information.
Flow Designer Automation	Automates task creation and assignment after a standard laptop request is submitted.

Template alignment: The uploaded template defines a DFD as a visual representation showing how data enters/leaves the system, how information is transformed, and where data is stored. This canvas applies that structure to the Standard Laptop procurement automation project.
